

Project Design Phase-II

Data Flow Diagram & User Stories

Date	30 June 2026
Team ID	[Team ID]
Project Name	Customer Care Registry
Maximum Marks	4 Marks

Data Flow Diagrams

A Data Flow Diagram (DFD) shows how data moves through the Customer Care Registry system — how it enters, is processed, stored, and returned to users. Two levels are presented below: a Level-0 context diagram showing the system as a single process, and a Level-1 diagram decomposing it into its core sub-processes.

Level 0 — Context Diagram

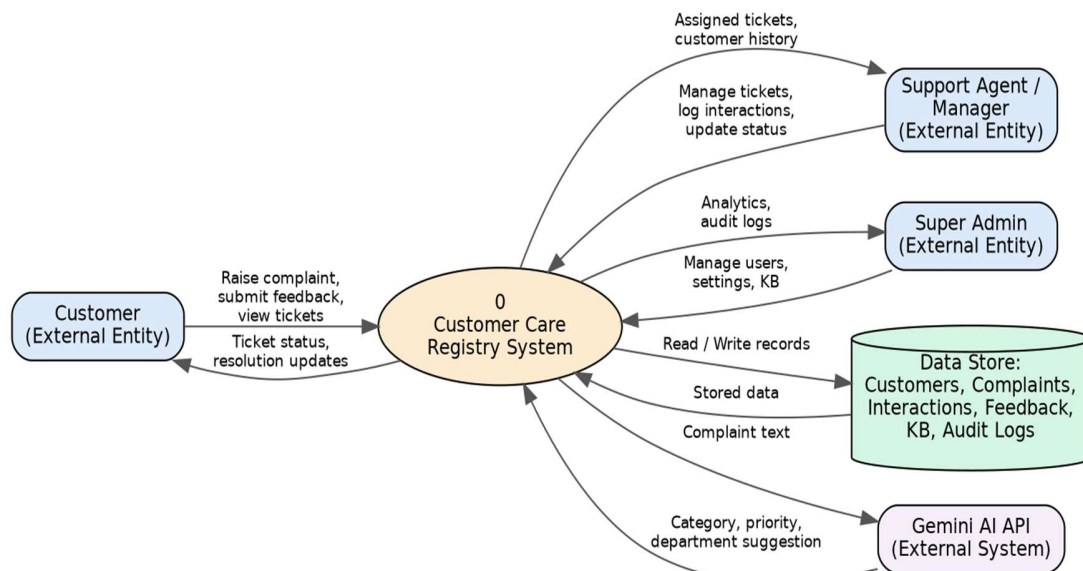

Figure 1: Level-0 DFD — Customer Care Registry system in context

Level 1 — Detailed Process Diagram

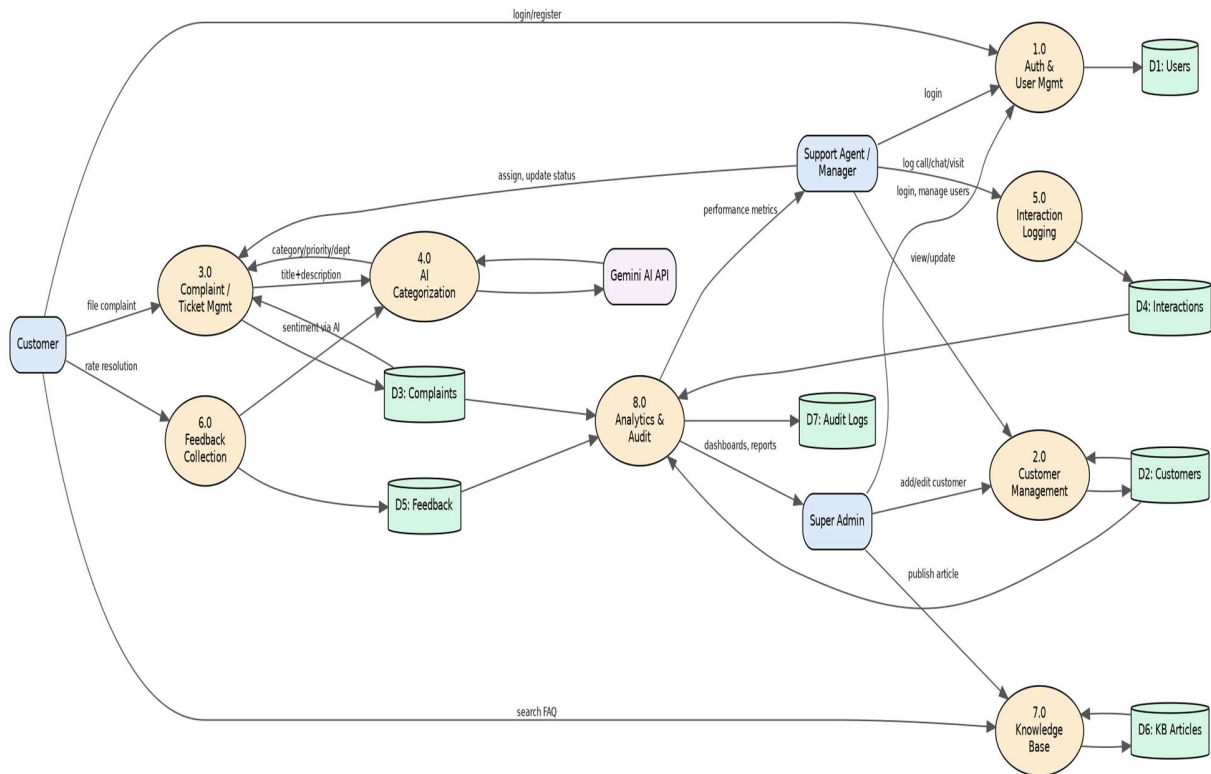

Figure 2: Level-1 DFD — core sub-processes and data stores

User Stories

The table below lists the user stories derived from the implemented modules of the Customer Care Registry application (authentication, customer management, ticketing, AI categorization, interaction logging, feedback, knowledge base, analytics, audit, and settings), grouped by user role.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Customer	Registration & Login	USN-1	As a customer, I can register for the portal by entering my full name, email, phone, and address.	I receive a success message and can access my dashboard after registration.	High	Sprint-1
		USN-2	As a customer, I can log in with my email and password to access my tickets.	I am redirected to the Ticket Center after a valid login.	High	Sprint-1
	Complaint / Ticket Management	USN-3	As a customer, I can raise a complaint by entering a title, description, category, and attachments.	A new ticket (e.g. TKT-2026-0001) is created with status 'New' and appears in my ticket list.	High	Sprint-1
		USN-4	As a customer, I can view the live status and timeline of each of my tickets.	I can see status changes (Assigned, In Progress, Resolved, etc.) with timestamps.	High	Sprint-2
		USN-5	As a customer, I can view the due date (SLA) for my ticket based on its priority.	The due date shown matches the SLA hours configured for that priority level.	Medium	Sprint-2
	Feedback	USN-6	As a customer, I can submit a rating, comment, and satisfaction level once my ticket is resolved.	My feedback is linked to the resolved complaint and visible to the support team.	Medium	Sprint-2
	Knowledge Base	USN-7	As a customer, I can search FAQs and articles before raising a complaint.	Relevant articles are shown based on keyword search and view counts increase.	Low	Sprint-3

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Support Agent	Ticket Handling	USN-8	As a support agent, I can view all tickets assigned to me in the Ticket Center.	Only tickets with my agent ID as assignee are listed by default.	High	Sprint-1
		USN-9	As a support agent, I can update a ticket's status and add timeline notes.	The change is time-stamped and appended to the ticket's timeline with my name.	High	Sprint-1
	Interaction Logging	USN-10	As a support agent, I can log a customer interaction (call, email, chat, visit, WhatsApp, video call) with a summary and notes.	The interaction is saved against the correct customer and is visible in their history.	Medium	Sprint-2
Support Manager	Team & Customer Oversight	USN-11	As a support manager, I can assign a ticket to any available support agent.	The ticket's assignedAgentId updates and the agent can see it in their queue.	High	Sprint-1
		USN-12	As a support manager, I can add and edit customer records.	New/updated customer details are validated and stored with a unique customer ID.	High	Sprint-1
	Knowledge Base Management	USN-13	As a support manager, I can publish and update Knowledge Base articles (FAQ, Solution, Article).	The article appears in the KB list with an updated timestamp.	Medium	Sprint-3
Super Admin	User Management	USN-14	As a super admin, I can create user accounts and assign roles (Super Admin, Support Manager, Support Agent, Customer).	The new user can log in with the assigned role and only sees permitted modules.	High	Sprint-1
	System Settings	USN-15	As a super admin, I can configure SLA hours per priority and toggle auto-escalation.	New tickets calculate due dates using the updated SLA values.	Medium	Sprint-2
	Audit & Security	USN-16	As a super admin, I can view a complete audit log of user actions across the system.	Every create/update/delete action is recorded with user, action, and timestamp.	Medium	Sprint-3
	Analytics	USN-17	As a super admin, I can view analytics dashboards showing complaint trends, department and agent performance.	Charts reflect real-time counts of filed/resolved complaints and satisfaction scores.	High	Sprint-2
